

2024 Quality and Patient Safety Outcomes:

- **No cases** of Healthcare-Associated Multidrug-Resistant Organism (MDRO) Blood Stream Infections were reported for all inpatients.
- **No cases** of Healthcare-Associated Infections (HAI) due to Clostridium Difficile Infection (CDI) were recorded among adult inpatients.
- **No cases** of perioperative pulmonary embolism or deep vein thrombosis were reported, showing performance that is better than international benchmarks (AHRQ).
- The 30-day unplanned hospital readmission rate remains low, **performing well below internationally accepted thresholds (CMS).**
- A high percentage of patients were seen within 60 minutes of arrival, which is **above international timeliness benchmarks.**
- Timely specialist appointments within 14 days were achieved for most patients, **going beyond international benchmarks.**
